Emergency Management Assistance Compact Resources in California

The Emergency Management Assistance Compact (EMAC) is the Nation's mutual-aid system that provides a formal structure where all 50 States and 4 Territories have the ability to share resources across State boundaries. The Cal OES EMAC Coordinator in coordination with Cal OES Fire Branch are working together to request and coordinate needed resources via the EMAC Compact.

- The following states have EMAC resources in California:

- Idaho: 5 engines
- Montana: 5 engines
- New Mexico: 5 engines
- Washington: 15 engines
- Utah: 10 engines
- Texas: 25 engines
- Arizona: 1 Type 1 Helicopter
- Oregon: 1 Type 1 Helicopter

WEATHER OF CONCERN

NORTHERN CALIFORNIA

- Hot temperatures across the entire San Joaquin Valley and desert areas, as well as many foothill locations this weekend. The combination of hot day time temperatures and warm night-time temperatures could combine to create a dangerous condition in which heat illnesses are possible.
- Air Quality Alerts have been issued for portions of Northern California until wildfires are extinguished.

SOUTHERN CALIFORNIA

- Flash Flood Warnings have been issued for multiple counties in Southern California through Thursday night.
- Increasing monsoon moisture will continue the threat of thunderstorms over the mountains and deserts into this evening.
 - These storms may produce gusty winds, heavy rain, and flash floods/debris flows – especially near recently burned areas.
- Air Quality Alerts have been issued for portions of Southern California until wildfires are extinguished.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

The offshore trough will gradually move over the region tonight and Friday. Can't rule out some high based showers favoring the Oregon border area the next couple of days, based on the trough presence, but the thunderstorm threat should remain north of the Oregon border as drier air entrains over the region. Wind speeds will increase slightly today with peak gusts between 20-25 mph favoring the Shasta Valley, areas along and east of the Cascade and Sierra Crest as well as the Delta Region. As the trough crosses over the area Friday, a pronounced northerly wind (NE-N-NW) will develop over the northern third by afternoon. Peak gusts will generally range between 20 to 25 mph favoring the higher ridges located in Del Norte and Siskiyou counties. Other portions of the region will experience W-SW directions with a southerly flow within portions of the Sacramento Valley.

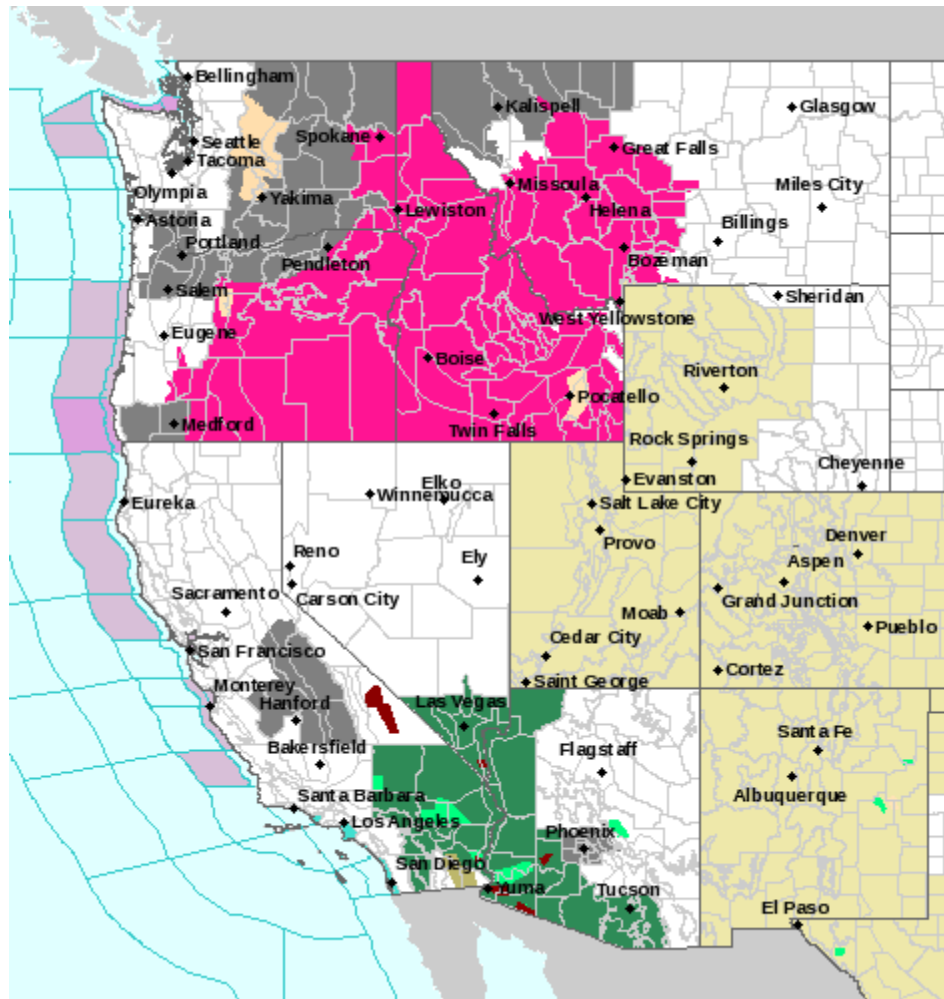

A ridge of high pressure should build over California on Saturday. Temperatures will warm and the inversions will become more pronounced as humidity values lower. The wind flow will lessen overall across the region with residual N-NE-NW directions found across the NW third of the area.

Weather models remain in unison by depicting a partial break down of the ridge Sunday into early next week due to an incoming Pacific trough. What they have been differing slightly on has been the overall strength and placement of the trough. Placement matters in terms of weather impacts in Northern California. Still too early to say but suspect pre-frontal wind speeds will increase and temperatures would cool slightly. Thunderstorms should also remain to the north of the region. Confidence is only moderate at this time for the earlier half of next week.

SOUTHERN CALIFORNIA

The presence of significant monsoonal moisture will fuel the development of scattered wet thunderstorms today. The storms are expected to be greater in number today and will be capable of producing brief heavy rain. The best chance of seeing thunderstorm activity will be in the high Sierras as well as the San Bernardino and Cleveland National Forest. Westward movement of the storms may allow one or two to make it into the urban interface areas of Southern California. After today, southwesterly flow should scour most of the moisture from the area. Isolated storms will be possible Friday, but no convection is expected this weekend through the first half of next week. A warming trend is expected over the weekend with highs back to 100 in the valleys and lower foothills under strong sunshine. Minimum relative humidity will turn a bit lower over the weekend with minimums reaching the teens over many areas below 7,000 feet. Less marine layer coverage is expected this weekend, but a weak trough to the north may bring a return of breezy conditions to the deserts Monday along with sea breeze conditions elsewhere. Thunderstorms may be possible by late next week.
